Education

Sattler College

May 2027

Bachelor of Science in Computer Science and Cybersecurity, Dual Degree Program, GPA: 3.92

Boston, MA

- **Relevant Coursework:** Data Structures and Algorithms, Complexity and Computation, Systems and Parallel Programming, Program Design, Object Oriented Programming, Network Systems and Security, Information Systems and Project Management.
- **Awards:** 3x President's List, Dean's List Honors, William Carey Academic Achievers' Scholarship (\$53,000 per year)

Technical Skills and Certifications

Languages: Python, Javascript, Rust, Typescript, C/C++, Swift, Java, HTML/CSS, SQL, HCL Terraform

Frameworks/Libraries: gRPC, Pytorch, Prisma, Tensorflow, Flask, AngularJS, SwiftUI, rxJS, React, UIKit, Core Data

Developer Tools: Claude Code, Kubernetes, Kafka, Prometheus, Docker, Valgrind, CMake, Git, Expo, GCP, AWS, IaC

General Certifications: Software Architecture Foundations, Azure Fundamentals, Linux Unhatched (CISCO)

Professional Certifications: Practical Network Penetration Tester (PNPT), Google Professional Cybersecurity Certificate

Experience

CarGurus

May 2026 – August 2026

Software Engineer Intern, Infrastructure

Boston, MA

- Implementing and end-to-end migration of CarGurus' enterprise synthetic monitoring infrastructure from Catchpoint to Grafana Cloud. This is an initiative on a projected **10x** cost optimization in the company's annual observability expenditure.
- Developing multi-step synthetic user journeys using Playwright and Grafana k6 scripts to proactively validate critical application flows such as authentication and checkout pipelines for services.
- Automating the deployment and lifecycle management of synthetic checks and private probes across hybrid environments using Terraform, GitHub Actions, Kubernetes Helm charts, and Docker to streamline synthetic monitoring CI/CD pipelines.

Google

May 2025 – August 2025

Software Engineer Intern

Mountain View, CA

- Designed and implemented a new feature on Ad Inspector that enables publishers to pass configuration parameters to request custom **GAM** and **AdMob** test **ads** for both iOS and Android applications on new iOS and Android/Decagon SDK versions.
- Collaborated cross-functionally with UI, Android, iOS SDK teams, and Product Management to align the feature with technical and business requirements.
- Authored a technical design document and presented the project architecture to senior engineers, driving discussions on architectural trade-offs and aligning the solution with Google design standards.

Adam Networks

May 2024 – August 2024

Offensive Security Engineer Intern

Ontario, Canada

- Executed an OWASP web application penetration test against Adam Networks, combining manual vulnerability discovery with deep-dive OSINT reconnaissance to map the external attack surface and identify sensitive data exposures.
- Developed black box custom proof-of-concept (PoC) exploits for discovered vulnerabilities to definitively demonstrate attack vectors, risk severity, and potential business impact to technical stakeholders.
- Authored comprehensive vulnerability reports detailing technical findings, CVSS-based risk assessments, and mitigation strategies, partnering directly with developers to validate patch efficacy and secure remediation.

Projects

CovenantIQ | Next.js/React, TypeScript, Python, FastAPI, RAG, VectorDB, Prisma/PostgreSQL | GitHub Link

- Built an Agentic AI platform for private credit teams that orchestrates multi-step document workflows across credit agreements, compliance certificates, financial statements, and EBITDA addback schedules.
- Designed an agentic review architecture using RAG, tool-calling agents, structured extraction, citation grounding, and human-in-the-loop validation to identify covenant discrepancies, missing support, near-breaches, and risky borrower addbacks.
- Built the core covenant intelligence workflow to transform manual quarterly compliance review into an analyst-ready process, targeting reduction of review time from **2-5** hours per borrower to under **30** minutes while preserving source-backed audit trails.

Leadership / Extracurricular

Sattler College

Fall 2025 – Present

Computer Science Tutor

CS 101 Intro to CS, CS 201 Data Structures and Algorithms

- Guided students through core concepts of data structures and algorithms in developing efficient problem-solving strategies and coding best practices using **Python**, **Java** and **C++**

C.O.D.E.R.S

Fall 2024 – Present

President

Sattler College

- Led weekly meetings and hands-on technical workshops, mentoring **12+** computer science students through projects, coding challenges, and emerging industry trends.
